LEGAL FORENSICS DISCLAIMER

This document serves as an immutable, timestamped cryptographic proof-of-existence and chain-of-custody log generated at signal-level export. The dual-anchor HMAC handshake was generated exclusively by the GravelKing server and can be independently verified only by combining the track-embedded nominator with the server-retained denominator. Any lossy re-encoding, bit-level alteration, or removal of the embedded watermark revokes the chain of custody.

Verification Endpoint: /api/kernel/verify-cert
