1.35 sec

30-second track,
full master

Time to master one track

Typical published turnaround per platform vs. measured MLK V3.5 processing time (3.5-min song)

Bar lengths compressed for readability - actual gap is far larger (minutes vs. seconds).

What the others don't offer

- **Cryptographic IP certification**
Every master can carry a split-key certificate proving authorship - embedded in the audio itself.
- **Sub-35 ms watermark verification**
Prove a file is yours in the time it takes to blink. Measured: 15-32 ms including upload.
- **Kernel-level DSP**
Morris Law Kernel V3.5 - purpose-built multi-band mastering engine, not a generic preset chain.

METHODOLOGY - THESE ARE REAL NUMBERS

MLK V3.5 timings measured Aug 5, 2026 against the live GravelKing Pro API: 3.5-min stereo WAV mastered in 8.4-9.0 s across 5 warm runs (median ~8.6 s); 30-s track in 1.34-1.37 s; watermark verify 15-32 ms including file upload. Times are server processing, excluding the customer's internet upload. Competitor figures are typical published/reported turnaround times per track (upload -> preview -> render) and include their queueing and rendering pipelines.
