

7-Day Promo Content Calendar

Morris Law Kernel v3.5 + IP Protection System · Kevin Morris · July 2026

Day 1 (Monday) — Problem Awareness (X / LinkedIn / Facebook)

"Most independent creators still have two big problems:

1. Getting pro-level masters without spending thousands.
2. Actually proving they own and created the audio in a way that holds up legally.

We're building something that solves both in one system. More soon."

Day 2 (Tuesday) — Teaser / Behind the Scenes (X / Reddit)

"Working on something that combines serious adaptive mastering performance with actual cryptographic proof of human authorship.

Numba-accelerated DSP + robust watermarking + multi-layer provenance.

This is going to be the technical moat for independent creators who want both great sound and real ownership."

Day 3 (Wednesday) — Value / Education (LinkedIn / Facebook)

"Quick thought: Simple LSB watermarks are easy to strip or challenge in court.

We're using a multi-layer approach: content hash + perceptual hash + digital signature tied to a specific creator + brand + timestamp.

This is the kind of system that can actually stand up as evidence."

Day 4 (Thursday) — Demo Teaser (X / YouTube / TikTok style)

"30-second clip idea:

Show before/after mastering + then show the verification report popping up with the creator's name, brand, and timestamp.

'This file was mastered and cryptographically signed by [Your Name] on [Date].'

That's the future we're building."

Day 5 (Friday) — Social Proof / Vision (LinkedIn)

"Independent creators deserve tools that are both technically excellent and legally strong.

We're building the first system that gives you adaptive, high-performance mastering + court-grade proof of human authorship in one stack.

This is infrastructure for creator ownership."

Day 6 (Saturday) — Community / Engagement (X / Reddit)

"Question for producers and audio tech people:

If you could have one tool that gave you both better masters AND ironclad proof you created it, what would that be worth to you?

Genuinely curious what people think."

Day 7 (Sunday) — Call to Action / Soft Launch (All platforms)

"We're getting close to sharing the first public version of Morris Law Kernel v3.5 + the full IP protection system.

High-performance adaptive mastering. Robust watermarking. Cryptographic provenance that can actually be used as evidence.

If you want early access or want to be notified when it drops, drop a comment or DM me.

Building in public for creators who want real ownership + real quality."
