

Demo Video Script

Morris Law Kernel v3.5 + IP Protection System · Kevin Morris · July 2026

Video Style

- Screen recording + voiceover (Loom or similar)
 - Clean, professional, confident tone
 - Show the actual working system where possible
-

Script Structure

0:00 – 0:20 | Hook

"Most creators still face two big problems: getting truly great masters without huge expense, and actually being able to prove they own and created the audio in a way that holds up legally.

We built something that solves both."

0:20 – 1:00 | The Problem (Quick)

"Today you either get:

- Expensive black-box mastering, or
- Weak watermarks that are easy to strip or challenge in court.

There's been no good middle ground — until now."

1:00 – 2:30 | The Solution – Live Demo

Show the Streamlit app (app.py)

"Here's Morris Law Kernel v3.5 in action.

[Upload audio]

You choose a preset — we're using GravelKing Max.

You set intensity, target LUFS, and it applies adaptive mastering with stereo-linked sidechain, bass-aware adaptation, and auto-threshold — all accelerated with Numba.

[Show processed audio playing]

Now here's the IP Protection layer.

[Click into IP Protection tab or show separate flow]

We generate a cryptographic provenance record that includes:

- Content hash
- Perceptual hash
- Your user ID and brand
- Timestamp

- Digital signature

This gets embedded using robust hybrid watermarking that survives re-encoding."

2:30 – 3:30 | Verification Flow

"Later, anyone can verify the file.

[Show verification_api.py flow or simulated verification]

The system checks:

- Content hash
- Perceptual hash
- Digital signature

And returns a signed report with the creator's name, brand, and timestamp.

This is the kind of evidence that can actually be used with the Copyright Office or in legal proceedings."

3:30 – 4:00 | Close + CTA

"We built this as the technical moat for GravelKing Pro — and we're making it available for licensing and partnerships.

If you're working on audio tools, platforms, or creator infrastructure and want both better sound and real ownership protection, this is worth a look.

Happy to share the white paper or hop on a quick call.

Thanks for watching."

Production Tips

- Keep total length under 4 minutes
- Use clean screen recording + face cam (optional)
- Show real working app where possible
- End with contact info and Calendly link

Recommended Tools: Loom, Descript, or CapCut for quick editing.
