Morris Law Kernel v3.5 + IP Protection System · Kevin Morris · July 2026

Template 1: Initial Outreach to Potential Strategic Partner / Licensee

Subject: New adaptive mastering + court-grade IP protection system

Hi [First Name],

I'm the founder of GravelKing Productions. We've built Morris Law Kernel v3.5 — a production-ready adaptive audio mastering engine combined with cryptographically verifiable human authorship and ownership (multi-layer provenance + robust watermarking + verification API).

It's designed to give creators both superior sound quality and real legal defensibility in one system.

Would you be open to a short 15-minute call to see a demo? I'm selectively reaching out to a few companies working on audio tools and creator infrastructure.

Happy to send the white paper or a short Loom video first if preferred.

Best regards,

Kevin Morris

Founder, GravelKing Productions

Template 2: Follow-up After They Showed Interest

Subject: Follow-up — Morris Law Kernel v3.5 demo

Hi [First Name],

Thanks for the quick reply.

Here's a short 3-minute Loom demo of the system in action: [Insert Loom link]

It shows:

- Adaptive mastering with all three advanced features
- Robust watermark embedding
- Cryptographic provenance record creation
- Verification flow (what a court or platform would see)

Would you be available for a quick call next week? I'd love to hear your thoughts and explore if there's a fit.

Best,

Kevin

Template 3: Investor / Strategic Partner (More Formal)

Subject: Morris Law Kernel v3.5 — Adaptive Mastering + Court-Grade IP Protection

Dear [Name],

I'm reaching out because [Company/Fund Name] has been active in the music tech and creator tools space.

We've developed what I believe is the first integrated system that combines high-performance adaptive audio mastering with cryptographically signed, court-grade proof of human authorship and ownership.

Key capabilities:

- Numba-accelerated adaptive mastering engine
- Robust hybrid watermarking (survives re-encoding)
- Multi-layer cryptographic provenance (content hash + perceptual hash + digital signature)
- Blockchain/trusted timestamp anchoring option
- Verification API that produces signed legal reports

I've attached the white paper and pitch deck for your review.

Would you be open to a short introductory call?

Thank you,

Kevin Morris

Template 4: Warm Introduction Request

Subject: Quick intro request — Morris Law Kernel v3.5

Hi [Name],

I hope you're doing well.

I'm building Morris Law Kernel v3.5 — an adaptive mastering engine with built-in court-grade IP protection.

I noticed you're connected with [Mutual Connection or Company]. Would you be open to making a warm introduction? I'd love to share what we're building and explore potential alignment.

Happy to send a short one-pager first.

Thanks in advance,

Kevin Morris
