

One-Page Executive Summary

Morris Law Kernel v3.5 + IP Protection System · Kevin Morris · July 2026

The Opportunity

Independent creators and music platforms need two things: superior sound quality and provable ownership. Current solutions address one or the other, but not both effectively.

The Solution

Morris Law Kernel v3.5 is the first integrated system that delivers:

- **High-performance adaptive mastering** — Numba-accelerated with stereo-linked sidechain, bass-aware adaptation, and auto-threshold. Delivers pro-level results efficiently.
- **Court-grade IP protection** — Robust hybrid watermarking (survives re-encoding) + multi-layer cryptographic provenance (content hash + perceptual hash + digital signature + brand locking).
- **Blockchain/trusted timestamp anchoring** — Immutable record for maximum legal defensibility.
- **Fast verification API** — Generates signed reports suitable for Copyright Office and legal proceedings.

Key Differentiators (The Moat)

- First and only system combining high-quality mastering with cryptographically verifiable human authorship.
- Multi-layer tamper detection (far stronger than simple watermarks).
- Designed for legal evidence from day one.
- Production-ready (Python + TypeScript + Streamlit frontend + FastAPI backend).

Market Potential

- Licensing to DAWs, music platforms, and creator tools
- Premium features inside GravelKing Pro
- API access for developers
- White-label IP protection service
- Potential acquisition by major audio/tech companies

Traction & Readiness

- Production engine complete and accelerated
- Robust watermarking + cryptographic system implemented
- Professional frontend and verification service live
- Full documentation, white paper, pitch deck, and licensing templates ready

Business Model

- Licensing the engine (setup + usage fees)
- Strategic partnerships with DAW and platform companies

- Paid pilots and early access
- Potential buyout or large licensing deal

Team

Kevin Morris — Founder & Principal Architect, GravelKing Productions

Extensive experience in low-level audio DSP and high-performance optimization.
