

Pitch Deck — Content Outline

Morris Law Kernel v3.5 + IP Protection System · Kevin Morris · July 2026

Slide 1: Title

Morris Law Kernel v3.5

The First Adaptive Mastering Engine with Court-Grade IP Protection
GravelKing Productions | July 2026

Slide 2: The Problem

- Great sounding masters are expensive or black-box.
- Proving human authorship and ownership of audio is weak and easily challenged.
- Independent creators have no affordable way to get both superior sound **and** legally strong IP protection.

Slide 3: The Solution

One integrated system that delivers:

- Superior adaptive mastering (Numba accelerated)
- Robust watermarking that survives re-encoding
- Cryptographic proof of human authorship + specific ownership
- Blockchain-anchored immutability
- Verification reports suitable for copyright office and courts

Slide 4: How It Works

1. Audio → MLK v3 DSP Kernel (adaptive mastering)
2. Robust hybrid watermark embedding
3. Cryptographic provenance record (user + brand + timestamp + hashes)
4. Optional blockchain anchoring
5. Server-side verification produces signed legal report

Slide 5: Competitive Advantage (The Moat)

- First and only system combining high-performance adaptive mastering + court-grade IP provenance.
- Multi-layer cryptographic binding (content hash + perceptual hash + digital signature).
- Designed for legal defensibility from day one.
- Extremely difficult and expensive for competitors to replicate.

Slide 6: Market

- Independent musicians & producers

- Music libraries & sync agencies
- Labels and distributors
- Audio platforms and DAWs seeking differentiation
- Anyone who needs to prove ownership of audio content

Slide 7: Business Models

- Licensing the engine to DAWs and platforms
- White-label IP protection service
- Premium features inside GravelKing Pro
- API access for developers
- Potential acquisition by major audio/tech companies

Slide 8: Traction & Readiness

- Production-ready core engine (Numba accelerated)
- Robust watermarking implemented
- Cryptographic provenance + verification API ready
- Professional frontend live
- Full documentation and integration guides complete

Slide 9: The Ask

Looking for:

- Strategic licensing partners
- Investors who understand creator tools + IP infrastructure
- Acquisition interest from audio platform companies
- Early adopter platforms and DAWs
