

Start Here — Simple Guide to Your Package

Morris Law Kernel v3.5 + IP Protection System · Kevin Morris · July 2026

This guide explains, in plain language, what is in your business package and how to use it. Read this first.

What you have

You have a complete "go to market" kit for one product: **Morris Law Kernel v3.5** — your audio mastering engine that also stamps songs with proof of who made them.

Think of the package as three boxes:

1. **Documents that explain the product** — you send these to people who might pay you (investors, software companies, music platforms).
2. **Documents that help you sell** — ready-made messages, posts, and email scripts so you never start from a blank page.
3. **Documents that keep you organized** — checklists and trackers so nothing falls through the cracks.

The first three things to do

1. **Watch your own pitch.** Open the pitch deck (now a real slide presentation) and read it out loud twice. This is your story — know it cold.
2. **Start the 7-day posting plan.** The posts are already written. Copy one per day to X, LinkedIn, and Facebook.
3. **Send 10 LinkedIn messages.** The messages are already written too. Log every send in the Outreach Tracker.

What each document is for

Document	What it is, in plain words
One-Page Executive Summary	The whole business on one page. Send this first when someone asks "what is it?"
White Paper	The detailed technical story. Send when someone serious asks "how does it work?"
Pitch Deck	Your slide presentation for meetings and calls.
Financial Projections	What you plan to charge and what you could earn. For investor conversations.
0-30 Day Financial Plan	Your week-by-week to-do list for the first month.
Licensing Terms Template	A starting-point contract for when a company wants to use your technology. A lawyer should review before you sign anything.
LinkedIn Outreach Playbook	Who to contact and the exact messages to send them.
Investor & Partner Email Templates	Four ready-to-send emails for different situations.
7-Day Promo Content Calendar	One social media post per day, already written.
Demo Video Script	The word-for-word script for a 2-4 minute demo video.
Data Room Structure	How to organize your files when a serious buyer wants to look deeper.
Data Room Checklist	The list of things serious buyers will ask for.
Outreach Tracker	A simple table to track who you contacted and what happened.
Technical Architecture Overview	A 2-page technical summary of the real, working system.
Master Package Index	The table of contents for everything.

Words you will see (simple meanings)

- **Mastering** — the final polish that makes a song loud, clear, and ready for release.
- **Watermark** — an invisible stamp hidden inside the audio that says "this is mine."
- **Provenance** — the proof trail of who made a file and when.
- **Licensing** — letting a company use your technology for a fee. You keep ownership.
- **Pilot** — a small paid trial with one company before a bigger deal.
- **LOI (Letter of Intent)** — a written "we are seriously interested" note. Not a contract yet, but strong.
- **Data room** — a tidy folder of documents you share when someone is close to paying or investing.
- **NDA** — an agreement that they will not share your secrets.

One honest note

The revenue numbers in the Financial Projections are **estimates and targets**, not promises. They are a reasonable starting point for conversations. Update them with real numbers as soon as you have real deals — real numbers, even small ones, are always more convincing.
