

GravelKing Pro

GravelKing Pro — Bootstrapped Pitch Deck

(Slide-by-slide text — drop into Keynote/PowerPoint/Google Slides, one block per slide.)

Slide 1 — Title

GravelKing Pro Write. Compose. Record. Master. Release with Proof. The studio that fits in a phone — and the proof that the song is yours.

Slide 2 — The Problem

- Independent artists can't prove they wrote their own songs.
- Mastering costs \$50-\$150 a track; DAWs take months to learn.
- Writing, recording, mastering, and proof live in four different tools.
- AI-music disputes are exploding — and artists have no receipt.

Slide 3 — The Insight

The moment an artist finishes a song is the most emotional moment in music. That's when they need two things: **it has to sound like a record, and they have to be able to prove it's theirs.** Nobody delivers both in one flow.

Slide 4 — The Product (4 tools, one flow)

1. **JAX** — AI songwriting companion with keystroke-level authorship capture.
2. **Vocal Booth** — record, clip, splice, layer, pan. No DAW learning curve.
3. **The Foundry** — Morris Law Kernel v3.5 mastering to streaming loudness.
4. **Converter** — every format your release needs. Then: **IP Provenance Certificate** — court-ready PDF, HMAC-signed, watermarked into the audio itself.

Slide 5 — The Demo (30 seconds)

Prompt JAX → refine lyrics with authorship scoring → compose the track → cut vocals in Vocal Booth → master in the Foundry → download the certificate. *(This is exactly the flow in our 59-second promo video.)*

Slide 6 — Why the Certificate Wins

- Split-key HMAC-SHA256: half the signature is watermarked into the track, half never leaves our server. Unforgeable client-side.
- Authorship score 0–100 from a keystroke ledger — delete-and-retype scores zero.
- AI model ID + copyright-clearance result printed on the document.
- This is the receipt the industry is about to start demanding.

Slide 7 — Business Model

Tier	Price	What it unlocks
Free	\$0	Write with JAX, record in Vocal Booth
Pro	\$9.99/mo	Song generation, Foundry mastering, Converter, 20 WAV/mo
King	\$24.99/mo	Unlimited downloads + unlimited certificates + forensics
Impulse	\$1.99/track	Official certificate document at the moment of pride

Slide 8 — Why Bootstrapped Works Here

- Marginal cost per user is pennies (Gemini/ElevenLabs at scale).
- \$9.99 price point = one sold certificate + one mastered single covers a year of inference.
- No sales team: the product demos itself in 60 seconds on TikTok.
- Break-even at ~350 subscribers (see Financial Evaluation).

Slide 9 — Go-To-Market (see Bootstrap Workflow doc)

Organic-first: TikTok/Reels/Shorts demos of the write→master→certify flow, Reddit credibility in r/Songwriting and r/WeAreTheMusicMakers, Facebook groups for indie artists, referral program with commission on verified paid invoices only.

Slide 10 — Traction & Status

- Live in production at gravelkingpro.it.com (custom domain).
- Stripe live, embedded checkout with Apple Pay / Google Pay.
- Android app in Google Play review.
- Full pipeline — lyrics to certified master — working end to end.

Slide 11 — The Ask

We're bootstrapped and intend to stay that way. What we want from you: **introductions** (sync licensing, artist communities, music-tech press), **feedback** (use the product, break it), and **signal-boosting** the launch. If you know 500 songwriters, you know our first 50 customers.

Slide 12 — Closing

Every song deserves its receipt. GravelKing Pro — Write. Compose. Record. Master.
