

GravelKing Pro

GravelKing Pro — 14-Day Social Content Pack

Ready-to-post copy for Facebook, TikTok, and Reddit — Days 1-14. Each block has the post text plus an IMAGE PROMPT to paste into Gemini for the matching visual. Hand the whole file to Nina; each day is self-contained.

Link in bio / profile: gravelkingpro.it.com — never beg, always show. Hashtag base (rotate 3-5 per post): #songwriting #independentartist #originalmusic #musicproducer #singersongwriter #newmusic #songwriter

DAY 1

Facebook > I wrote a song about my ex at 1am, had it mastered by breakfast, and by lunch I held a cryptographic certificate proving every word is mine. No studio. No \$1,000 invoice. Just my phone. If you write songs and you've never been able to PROVE they're yours — this is for you. First verse is free: gravelkingpro.it.com

TikTok (caption; video = screen record the JAX chat writing a verse) > POV: it's 2026 and you can finally prove the song is yours ☐☐ #songwriting #independentartist #originalmusic

Reddit (r/Songwriting — text post, no link in body) > Title: How do you all document that YOU wrote your lyrics? > Body: Genuine question. With AI tools everywhere now, I got paranoid about proving authorship of my own songs. I started keeping dated drafts but that feels flimsy. What do you all do — email yourself drafts? Copyright office every song? Curious how serious people here are about it.

IMAGE PROMPT (Gemini): A moody phone-photo style shot: a songwriter's hand holding a phone at night, glowing chat conversation writing song lyrics on screen, beside it a formal certificate document with a gold seal. Dark room, warm lamp light, cinematic, vertical 9:16.

DAY 2

Facebook > The certificate hits different. Court-ready PDF. Your authorship score. The AI model that assisted (if any). Cryptographically signed, and half the signature is watermarked into the audio itself. Your song finally has a receipt.

TikTok > Nobody: ... Me at 2am watching my bedroom demo get mastered to streaming loudness on my PHONE ☐ #musicproducer #singersongwriter

Reddit (comment strategy today — answer 3 songwriting questions thoroughly in r/Songwriting & r/WeAreTheMusicMakers; no product mention unless asked)

IMAGE PROMPT (Gemini): Close-up of an official-looking digital certificate on a dark tablet screen, gold wax-seal style emblem, hex signature string partially visible, dramatic side lighting, shallow depth of field, vertical 9:16.

DAY 3

Facebook > Songwriters: what's your biggest fear — someone stealing your song, or it never sounding "finished"? I built something that fixes both. Ask me anything in the comments.

TikTok > Rating AI songwriting apps until I find one that actually writes like a human — Part 1 □ (show JAX conversation)

Reddit (r/WeAreTheMusicMakers) > Title: Mastering quotes are insane — what are you all paying? > Body: Got quoted \$120/track for mastering my EP. For a bedroom artist that's rent money. What are people here actually paying, and is anyone happy with DIY/automated options? Looking for real experiences.

IMAGE PROMPT (Gemini): Split-screen style graphic: left side a crumpled invoice reading "\$120 — mastering, 1 track", right side a phone showing a waveform being mastered with a glowing progress bar. Dark cinematic palette, amber accents, vertical 9:16.

DAY 4

Facebook > From voice memo to mastered single in one sitting. Write with JAX, cut vocals in the Vocal Booth (record, splice, layer — that's it, no 400-button DAW), master in the Foundry, certify it. That's the whole flow.

TikTok > Things I wish existed when I started writing songs □ #songwriter #newmusic (quick cuts of the 4 tools)

Reddit (comment day again — be the helpful person in 3 threads; answer one "how do I finish songs" post in depth)

IMAGE PROMPT (Gemini): A clean four-panel grid of a dark music app UI on a phone: chat bubble panel, microphone recording panel, mastering waveform panel, certificate panel. Violet and amber glow on black, sleek, vertical 9:16.

DAY 5

Facebook > "But is it really mine if AI helped?" — Here's how we answer that: a keystroke-level authorship ledger. Your edits, your deletions, your rewrites — scored 0–100. Copy-paste someone else's lyric? The score knows. Write it yourself? The score proves it.

TikTok > This app scores how much of the song YOU actually wrote 🎵 #songwriting #originalmusic

Reddit (r/Songwriting) > Title: Does AI assistance change how you feel about your own songs? > Body: I've been thinking about the line between "tool" and "ghostwriter." A rhyming dictionary is a tool. Autocomplete is... what? Where's your personal line? And would you want a way to measure/document how much of a song is actually yours?

IMAGE PROMPT (Gemini): Abstract visualization of a lyric sheet where each word glows in a different intensity — some words bright gold (human-written), some dim blue (AI-assisted), a circular "0-100" gauge in the corner. Dark background, data-art aesthetic, vertical 9:16.

DAY 6

Facebook > Saturday challenge: give JAX one line — any line — and see what it turns into. Sad, angry, funny, whatever. Post your favorite result below. First verse free at gravelkingpro.it.com.

TikTok > I gave an AI ONE line and it wrote the whole verse... then I made it a real song 🎵 (screen record: prompt → lyrics → generate → play 5 seconds)

Reddit (r/WeAreTheMusicMakers, weekend discussion) > Title: What's your actual songwriting workflow in 2026? > Body: Notes app? Voice memos at red lights? Full DAW sessions? I feel like everyone's process is chaos and nobody talks about it. What does yours look like start to finish?

IMAGE PROMPT (Gemini): A single glowing text message bubble floating in a dark void, expanding into a full page of lyrics like an unfolding origami letter, violet light, minimal, vertical 9:16.

DAY 7

Facebook > One week of watching people use this: the moment everyone falls in love is the certificate. The song is done, the master sounds huge, and then a court-ready document with your name on it appears. That's the moment it feels real.

TikTok > The most satisfying button in music right now 🎵 (screen record: tap certificate → PDF opens with name)

Reddit (comment day — 3 helpful answers; mention your own songwriting process naturally)

IMAGE PROMPT (Gemini): A smartphone held in two hands displaying an elegant certificate PDF with a name and gold seal, confetti-like light particles, dark studio background, shallow focus, vertical 9:16.

DAY 8

Facebook > No DAW. I'm serious. If you can tap four buttons — record, clip, splice, layer — you can cut vocals in the Vocal Booth. We deleted everything else on purpose.

TikTok > Deleting 400 buttons so you can just SING ☐ #independentartist
#singersongwriter

Reddit (r/Songwriting) > Title: How many of you avoid recording because DAWs are overwhelming? > Body: I write constantly but record almost never, because opening a DAW feels like piloting a plane. Is that just me? What would a “recording tool with 4 buttons” need to have for you to actually use it?

IMAGE PROMPT (Gemini): A cluttered intimidating DAW interface fading/dissolving on the left, transforming into one clean screen with four large glowing buttons (Record, Clip, Splice, Layer) on the right. Dark palette, amber glow, vertical 9:16.

DAY 9

Facebook > The Foundry doesn't ask you about compressor ratios. It masters your track to streaming loudness and gets out of the way. Musicians make music. Kernels do math.

TikTok > Before vs after mastering (headphone warning, the difference is ILLEGAL) ☐
(audio A/B — use a real master)

Reddit (comment day — find 2 “how do I master” threads, give genuinely useful loudness advice)

IMAGE PROMPT (Gemini): A waveform transforming from thin and flat to bold and powerful, rendered as liquid metal, dark background with warm amber highlights, macro photography feel, vertical 9:16.

DAY 10

Facebook > Free tier honesty post: yes, you can write with JAX and record vocals completely free, forever. The paid stuff kicks in when you want to generate the full track, master it, and certify it. You only pay when your song is worth \$10 to you.

TikTok > What \$0 gets you vs what \$9.99 gets you ☐ (split screen free/paid flow)

Reddit (r/WeAreTheMusicMakers) > Title: Musicians who've monetized a hobby tool — how'd you price it? > Body: Building something for songwriters and torn on where the free line should be. Too generous and nobody pays, too strict and nobody tries. Where did you draw yours and what happened?

IMAGE PROMPT (Gemini): Two phones side by side on a dark table: left screen bright with a chat full of lyrics labeled “FREE”, right screen showing a glowing mastered waveform and certificate labeled “PRO”. Cinematic product photography, vertical 9:16.

DAY 11

Facebook > Your voice memo deserves better than rotting in your phone. Dig out that chorus you hummed in the car. JAX will help you finish the lyrics, the Foundry will make it sound like a record, and the certificate makes it officially yours.

TikTok > Finishing songs I abandoned in 2023 — Part 1 □ (screen record the revival of an old idea)

Reddit (r/Songwriting) > Title: Post your oldest unfinished lyric. Let's finish ONE today. > Body: We all have a graveyard. Mine's a chorus about Route 66 from two years ago. Drop your abandoned line below and finish one today — I'll go first in the comments.

IMAGE PROMPT (Gemini): An old dusty cassette/voice-memo aesthetic photo dissolving into a glowing modern phone screen with lyrics, past-to-present transition, warm nostalgic tones meeting cool violet, vertical 9:16.

DAY 12

Facebook > The watermark is IN the audio. Not metadata. Not a database row. Half the cryptographic signature lives inside the sound wave itself. Someone would have to break the audio to break your proof.

TikTok > Your song has a secret fingerprint now □ #originalmusic #musicproducer

Reddit (r/WeAreTheMusicMakers) > Title: Audio watermarking for proof of ownership — snake oil or legit? > Body: Technical question for the audio nerds: if a watermark is embedded in the LSBs of the audio and paired with a server-side HMAC, how robust is that really as proof of origin? What attacks would it survive / not survive? Genuinely want the teardown.

IMAGE PROMPT (Gemini): Macro shot of a glowing audio waveform with a hidden hex-code pattern visible inside the wave shape, like a fingerprint made of sound, deep blacks with cyan highlights, vertical 9:16.

DAY 13

Facebook > Real talk: someone streaming your song proves nothing. Someone STEALING your song is when proof matters. Date-stamped authorship ledger + cryptographic certificate + watermarked audio = you walk into that argument holding receipts.

TikTok > POV: someone claims your song went viral because of THEM and you pull out the receipt □ #songwriter

Reddit (comment day — answer “what do I do if someone steals my song” threads with real documentation steps)

IMAGE PROMPT (Gemini): A dramatic courtroom-drama style scene rendered minimal: a single phone lying on a dark table under a spotlight, screen showing a certificate with gold seal, long shadows, tense cinematic mood, vertical 9:16.

DAY 14

Facebook > Two weeks in. What I learned: songwriters don't want another complicated tool. They want to write, sing, and own it. So that's the whole product: JAX writes with you, Vocal Booth records you, the Foundry masters it, and the certificate proves it's yours. Free to start: gravelkingpro.it.com

TikTok > I built the app I needed as a songwriter. Here's the whole thing in 59 seconds. (use the JAX promo video)

Reddit (r/Songwriting) > Title: After 2 weeks of asking about your workflows, here's what I built > Body: Two weeks ago I asked how you all document authorship. The answers (emailing yourself drafts, voice memos, hope) convinced me this needed to exist. I built a free tool that captures your authorship as you write and issues a signed certificate when you're done. Happy to answer questions — and tell me what it still needs.

IMAGE PROMPT (Gemini): A hero shot: phone centered on a dark desk with four glowing UI panels floating above it (chat, microphone, waveform, certificate), connected by thin light trails, premium product-render style, violet and amber on black, vertical 9:16.

Standing Rules for Nina

1. Post at consistent times (TikTok 6–8pm CT, Facebook 12–1pm CT, Reddit mid-morning).
2. Reply to EVERY comment within 2 hours on posting days.
3. If a post outperforms, make 2 more in the same format before inventing new ones.
4. Never argue with trolls; one polite reply, then move on.
5. Track weekly: which post drove the most signups (ask “how did you hear about us”).
