

PARTNER & AFFILIATE PITCH

GravelKing Pro

The all-in-one browser studio to make, split, master, and own your music — no installs, no plugins.

gravelkingpro.com · June 2026

■ The one-liner

GravelKing Pro is a complete music-production studio that runs in your browser. Write a song with AI, split any track into stems, sing over a backing in the Vocal Booth, mix in a full live DAW, master to release loudness, and convert any file — all from one tab, with nothing to download.

■ What it is

Most creators juggle a \$400/year DAW, a separate mastering service, a stem-splitter subscription, and a converter — and then still need somewhere to release. GravelKing Pro folds all of that into a single web app powered by our in-house Morris Law Kernel (MLK v3.5) audio engine. Your audio is processed on our own infrastructure and never handed to a third party.

■ Who it's for

- Independent artists and rappers who record at home and want pro results without pro overhead.
- Producers and beatmakers who need fast stems, mastering, and a live DAW in one place.
- Content creators who just need to convert, clean up, or split audio in seconds.
- Songwriters who want an AI co-writer and a way to certify their authorship.

■ The toolkit

Mixing Studio — a full live DAW in your browser

Import or record multiple tracks, set volume and pan, add per-track plugins (EQ, compression, reverb and more), then mix down and export a finished stereo file. Save your project and pick it back up later. Everything runs client-side in the browser — no upload, no round-trip latency.

Vocal Booth — practice, record, and mix your vocal

Load a backing track (or split one of your own songs into instrumental + a guide vocal), follow a scrolling teleprompter, hear the guide melody on demand, then record your take and mix it down with the instrumental. Lyric highlighting is energy-based and approximate — no transcription — and your final mixdown contains only the instrumental and your own recorded vocal.

Voice Splitter — instant instrumental & vocal

Drop in any audio or video file and split it into a separate instrumental and vocal by cancelling the center-panned vocal. It's instant and runs on our servers, not a third party. Center-cancel separation is approximate — expect some bleed — and it works best on true stereo mixes.

Mastering — release-ready loudness

Upload a finished mix, pick a preset that matches the genre, and apply a full mastering chain — EQ,

compression, and loudness with optional denoise. Preview, then download. Processed with MLK v3 and never uploaded to a third party.

Songwriting Studio — your AI co-writer

Enter a theme, mood, or lyric seed, pick a genre, and Gemini writes the complete song. Free users get the AI draft (no IP rights). Pro users edit line-by-line, certify their human–AI authorship, and send the finished song straight to Suno.

File Converter — any format, free

Convert any audio or video to MP3, WAV, FLAC, M4A, or OGG — audio is auto-extracted from video (MP4, MOV, even screen recordings). Free for everyone and processed without third-party upload.

Hardware Optimizer — benchmark your rig

Detects your CPU topology and runs a DGEMM benchmark to gauge audio-processing throughput, presented alongside the MLK V3.5 optimization sequence. (Node Auditor.)

GK Productions Label & Library

Browse the GK Productions roster and artist pages, explore the public Library, and submit your own tracks — a built-in home for releasing and discovering music.

Plans & pricing

- Starter — Free. Core tools and a standard report. The File Converter is always free.
- GravelKing Weekly — \$9.99/week. Studio access with a 3-day free trial.
- GravelKing Pro Plus — \$39.99/mo (3-day free trial). Full real-time metrics, unlimited runs, the live DAW, PDF reports, WAV downloads, line-by-line songwriting with certified authorship, and priority support.
- Node Auditor — \$499/mo. Everything in Pro Plus, plus enterprise benchmarking and the Hardware Optimizer.
- Backed by a 30-day money-back guarantee.

Why it's different

- One tab, zero installs — replaces a stack of separate subscriptions.
- Private by design — your audio is processed on our own infrastructure, never shared with third parties; the live DAW runs entirely in your browser.
- Honest about its craft — we tell you exactly what each tool does and where its limits are, instead of overpromising.
- Built-in IP — certify human–AI authorship on the songs you write.
- From idea to release — write, record, mix, master, and submit to the label without leaving the app.

■ Promote it

Send your audience straight to the app at <https://gravelkingpro.com>. Every paid plan starts with a free trial, so your referrals can try the full studio risk-free.

■ Copy you can paste

- One-liner: Make, split, master, and own your music in one browser tab — GravelKing Pro.
- Short: Stop paying for four tools. GravelKing Pro is a full browser studio — AI songwriting, stem splitting, a live DAW, and mastering — starting free.
- Social: Wrote, recorded, mixed and mastered a track without leaving my browser. GravelKing Pro is wild !' `gravelkingpro.com`
