

GRAVELKING PRO

Admin Strategy & Operations Deck

30-Day Plan · Valuation · Promos · Investor Targets

30-Day Zero-Dollar Subscriber Plan

The goal: convert the existing 30 daily visitors and 58 registered users into paying subscribers without spending on ads. Every tactic below is free except time.

Days 1–7: Fix the Funnel

- Publish the sign-in / service-worker fix immediately.
- Verify the mastering tool is 100% error-free in production.
- Add a free-trial CTA to the homepage hero.
- Send an email to all 58 users announcing the free trial and new fixes.

Days 8–14: Content & Community

- Post one tool demo video per day on TikTok, Instagram Reels, and YouTube Shorts.
- Launch a 7-day "Master a Track Free" challenge in private music groups.
- Cross-post on Reddit r/WeAreTheMusicMakers and r/hiphop101.
- Go live on StarMaker or Instagram showing the Vocal Booth.

30-Day Plan (continued)

Days 15–21: Partnerships & Affiliates

- Reach out to 20 independent music producers and offer them a free Pro Plus month in exchange for an honest review.
- Create a referral code: existing users get 1 free week for every paying subscriber they bring.
- Pitch the Vocal Booth to 5 TikTok singing creators as a free content tool.
- List GravelKing Pro on free product directories (Product Hunt, BetaList, Indie Hackers).

Days 22–30: Retention & Conversion

- Email trial users 48 hours before billing with a "how to cancel" transparency email (builds trust, reduces churn).
- Add in-app tooltips showing users the IP certificate they are building toward.
- Run a 48-hour "upgrade to Pro Plus" flash offer for Weekly users.
- Document every failed conversion and fix the top 3 UX blockers.

Target: 50 paying subscribers by Day 30. At \$25/mo blended ARPU, that is \$1,250 MRR from zero ad spend.

30-Day Plan (continued)

Daily Execution Rhythm

Morning (30 min)

Check analytics, respond to user feedback, post one social clip.

Midday (60 min)

Reach out to 5 creators/producers or post in one community.

Evening (30 min)

Review trial conversions, send follow-up emails, plan tomorrow's content.

KPIs to Track

- Daily unique visitors and sign-up rate
- Free trial starts and completion rate
- Paid conversion rate (target: 3% of free trial users)
- Churn in first 7 days (target: <15%)
- Viral posts: views, clicks, sign-ups attributed

30-Day Plan (continued)

Risks & Mitigations

- Risk: traffic is too low. Mitigation: post daily short-form content; each viral post can drive 500+ visitors.
- Risk: trial users do not convert. Mitigation: improve onboarding and show the IP certificate value immediately.
- Risk: tool errors return. Mitigation: keep maintenance mode toggle ready and monitor tool_errors table.
- Risk: customer support overload. Mitigation: create a FAQ page and canned responses for common issues.

Rule: if a tactic does not generate a sign-up within 48 hours, drop it and try the next one.

Honest Valuation & Bank Appraisal

This is an honest internal evaluation. No inflated multiples. No pretend traction. We value the asset based on what exists today, not what could exist.

Current State Snapshot

- 58 total registered users; 18 on Pro tier (likely manual/lifetime grants).
- 0 active paid subscriptions through Stripe as of today.
- 1 abandoned checkout session.
- 62 pageviews today, 30 unique visitors.
- Product is live: IP certs, mastering, DAW, vocal booth, beat maker, converter, label hub.
- Custom domain, payment infrastructure, admin tooling, and verification API endpoint exist.

Strengths

- Proprietary MLK V3.5 engine and Clean Room verification protocol.
- First-mover positioning in AI-assisted music chain-of-title.
- Live product, not a prototype.
- Low burn: solo/lean team, cloud infrastructure costs under control.

Valuation (continued)

Weaknesses

- No paid subscription revenue yet.
- Funnel was broken until recently; conversion data is thin.
- No enterprise contracts or LOIs.
- Lean team limits execution bandwidth.
- Brand awareness is near zero outside existing contacts.

Valuation Ranges

Liquidation / Fire Sale **\$150K–\$300K**

Codebase + IP engine + domain assets only.

Strategic Sale to Distributor **\$500K–\$1.5M**

Value of verification engine and first-mover position.

Pre-Seed Investment Round **\$1M–\$2M**

Product + team + IP + market opportunity.

Bank Collateral Appraisal **\$400K–\$800K**

Hard tech asset value; limited by lack of revenue.

Valuation (continued)

Can this stand as bank collateral?

Banks lend against cash flow, hard assets, or accounts receivable. A pre-revenue SaaS is difficult to collateralize. However, the technology asset can be appraised and pledged as part of a broader loan package.

- Document the MLK V3.5 engine, verification protocol, and codebase ownership.
- Get an independent IP appraisal from a valuation firm specializing in software/technology.
- Prepare a 3-year financial projection showing revenue ramp.
- Show the payment infrastructure and live user base as evidence of commercial viability.

Recommended loan package:

- SBA microloan or small-business line: \$25K–\$50K based on personal credit + business plan.
- Equipment/cloud credit line: \$50K–\$100K against infrastructure spend.
- IP-backed loan: \$100K–\$300K with a formal technology appraisal and UCC filing.

A realistic bank loan backed by the technology asset alone is likely \$100K–\$300K at this stage. A larger loan requires revenue or a personal guarantee.

Valuation (continued)

What to do to increase valuation in 90 days

- Reach 100 paying subscribers: this adds ~\$30K ARR and changes the conversation.
- Sign 1 LOI with a distributor or sync agency: enterprise pipeline is the biggest valuation driver.
- File provisional patents or trade-secret documentation on the verification protocol.
- Publish a case study showing a real artist using the IP certificate.
- Build a waitlist of 500+ emails for the enterprise Verify API.

Bottom line: the company is worth \$500K–\$1M today as a strategic technology asset. With 100 paying subscribers

7-Day Promo Post Calendar

Use these posts across platforms. Tailor the hook and length to each channel.

Day 1: Hook — The Rights Crisis

Instagram / TikTok / Facebook

200 million AI tracks hit streaming last year. If you used AI to help write your song, can you prove YOU made it? GravelKing Pro can. Start free at gravelkingpro.it.com.

LinkedIn / X

The Copyright Office says AI-only works get no protection. The real question: how do you prove your human contribution? We built a platform that does exactly that. #MusicTech #AI #Copyright

YouTube Shorts

Screen recording: open the Songwriting Studio, show the AI draft, rewrite it, and reveal the authorship score. End with CTA.

Promo Calendar (continued)

Day 2: Tool Demo — Mastering

Post: Upload a rough mix. Pick a preset. Get a mastered WAV. Show before/after waveforms. "This is how independent artists sound radio-ready without a studio." Link in bio.

Day 3: Tool Demo — Vocal Booth

Post: Record a vocal over a backing track in the browser. Show the teleprompter and the mixdown.

Caption: "Your home studio is now a professional booth."

Day 4: Tool Demo — Live DAW

Post: Multi-track screen recording showing EQ, reverb, and mixdown. Caption: "No download. No \$400 DAW. Just a browser tab and your ideas."

Day 5: Social Proof / IP Certificate

Post: Show the IP certificate UI. "This is your proof-of-ownership document. Not metadata. Not a receipt. A forensic record of your human creative contribution."

Day 6: Offer — Free Trial

Post: "7-day free trial of Pro Plus. Full studio, unlimited runs, IP certificates. Cancel anytime. Try it at gravelkingpro.it.com."

Day 7: Behind the Scenes / Founder

Post: Personal founder story. Kevin Morris, the MLK engine, why the problem matters. Build trust and humanize the brand.

Promo Calendar (continued)

Posting cadence by platform

TikTok / Reels

1–2 short videos per day. Use trending audio, but keep the message about ownership/proof.

YouTube Shorts

1 short per day. More educational, less hype.

X / Twitter

3–5 posts per day: one hook, one tool tip, one thread, one reply to a music account.

LinkedIn

1 post per day. Frame as music-tech/founder journey. Target investors and distributors.

Facebook

1 post per day. Join indie artist groups and share value-first.

Reddit

Post in r/WeAreTheMusicMakers, r/hiphop101, r/edmproduction. No hard sell; answer questions.

LinkedIn Targets: Early Sell & Investment

These are real people active in music-tech, media, and angel investing. Search them on LinkedIn, connect with a personalized note, and pitch the problem first.

Tier 1: Music-Tech Angels & Operators

Larry Marcus

Marcy Venture Partners, Pandora founding investor, music-focused.

Scooter Braun

SB Projects, Ithaca Holdings, artist/tech investor.

Cooper Turley

Music/crypto angel, active in music tech.

Troy Carter

Atomic, music-tech investor.

Kevin Mayer

Former TikTok CEO, Disney+, media/tech investor.

David Kalt

Reverb founder, music/tech investor.

Peter Gabriel

Musician, tech investor, WITNESS founder.

Craig Kaltman

Atlantic Records, music/tech investor.

LinkedIn Targets (continued)

Tier 2: Generalist Angels & Syndicates

Ron Conway

SV Angel, prolific seed investor.

Gary Vaynerchuk

VaynerMedia, angel investor.

Eric Ries

Long-Term Stock Exchange, Lean Startup.

Auren Hoffman

SafeGraph, angel investor.

Charlie Songhurst

Former Microsoft strategy, angel investor.

Herman Kienhuis

Curiosity VC, software investor.

Mark Gillespie

Music manager/investor.

Outreach Script

Subject: AI-assisted music chain-of-title — looking for feedback. Hi [Name], I built GravelKing Pro, a browser studio that proves human creative contribution on AI-assisted tracks. The Copyright Office has made the legal standard clear; the missing piece is a platform that captures proof. We are live, processing audio, and raising a small seed. Would love your take on the space. 10-minute call?

LinkedIn Targets (continued)

Strategic Buyer Targets (Early Sell / Acquisition)

Independent Distributors

DistroKid, TuneCore, CD Baby, UnitedMasters — need chain-of-title verification.

Sync Licensing Agencies

Musicbed, Epidemic Sound, Artlist — chain-of-title is contractually mandatory.

Publishing Administrators

Kobalt, Songtrust, AMRA — need provable authorship.

DAW / Plugin Companies

Splice, LANDR, iZotope — could acquire the IP engine.

AI Music Startups

Suno, Udio — may need compliance/authorship tooling.

How to approach strategic buyers

- Lead with their liability, not your product.
- Show a 2-minute demo of verify-cert in action.
- Offer a 30-day free API integration pilot.
- Quote a \$25K–\$100K annual capacity license as the starting point.

Other Strategic Intelligence

Competitive Landscape

- Splice / LANDR: mastering and samples, no IP/certification.
- Suno / Udio: AI generation, no human authorship proof.
- Stem-splitting tools (Spleeter, Demucs): utility, no rights infrastructure.
- No direct competitor in AI-assisted music chain-of-title verification.

Key Risks

- Legal risk: copyright law evolves. Mitigation: stay aligned with Copyright Office guidance, not ahead of it.
- Technical risk: a competitor replicates the verification API. Mitigation: accumulated server-side records are hard to copy.
- Market risk: artists do not care about IP until they have a hit. Mitigation: sell the creative tools first, then the certificate.
- Execution risk: lean team limits speed. Mitigation: raise seed to hire sales and support.

Strategic Intelligence (continued)

KPI Dashboard — First 90 Days

Metric	Today	30 days	90 days
Users	58	200	500
Paying subs	0	50	150
MRR	\$0	\$1,250	\$4,500
Enterprise LOIs	0	1	3
Verify API calls	0	100	5,000
Social followers	?	1,000	5,000

What to Measure Weekly

- Visitor-to-signup conversion rate
- Signup-to-trial start rate
- Trial-to-paid conversion rate
- 7-day and 30-day retention
- Cost per acquisition (once ads start)
- Support ticket volume and resolution time

Strategic Intelligence (continued)

Next Decisions for the Founder

- Raise or bootstrap? Recommendation: raise \$250K seed to accelerate sales and support.
- Consumer or enterprise first? Recommendation: both, but consumer pays bills while enterprise builds the moat.
- Build more tools or sell existing ones? Recommendation: lock the 4 pillars; do not add bloat.
- Trademark the IP certificate name? Yes — file trademark on "Clean Room Certificate" or similar.
- Patent or trade secret? Trade secret is safer and faster; document internally.

The next 30 days are about proof of conversion. The next 90 days are about proof of enterprise demand. Everything

Execute the 30-day plan.

Convert visitors. Close one enterprise conversation. Prove the value.
