

THE JOEL MEETING

The core is tested. The partner handoff is the decision.

THE HONEST CLOSE

Controlled load is green. Current mastering is capped at 3 concurrent jobs. Before credentials: publish /api/v1/ingest, hard-gate x-api-key, run one real production smoke test, then pilot 10 → 50 → 100 tracks before promising a 500-track queue.

Opening line: "I can show you what is measured, what is protected, and exactly what we will validate next."
