

GRAVELKING PRO

Admin Strategy Brief

Confidential · Internal Use Only

Executive Thesis

The MLK V3.5 engine is not a feature. It is credentialing infrastructure — the same category as a credit bureau, title insurer, or certification body.

Every mastered track leaves our servers with a cryptographic Clean Room certificate split between the audio file (LSB nominator) and our server (denominator + HMAC). Neither half validates alone.

This creates a verification monopoly. Only GravelKing Pro can authenticate a GKP master. That is the enterprise business model, not the SaaS subscription.

Three Revenue Pillars

01 — Volume

Automated mastering fees via Pro subscriptions. Gateway drug to certification.

02 — Margin

Enterprise catalog audit tiers. Labels and distributors verifying AI-assisted catalogs at scale. \$499/mo base, cust

03 — Network

Verification API call volumes. Third-party platforms, DSPs, and attorneys ping our endpoint for chain-of-title.

Enterprise Tiers

- Free — Core tools, limited runs
- Pro — \$9.99/mo — Active indie artists, ~\$180 LTV
- Enterprise Starter — \$499/mo — Small labels, 500 track audits/mo, ~\$12K LTV
- Enterprise Pro — \$2,499/mo — Mid-size labels, 5,000 audits/mo, ~\$60K LTV
- Chain-of-Title License — \$25K–\$100K/yr — White-label verification
- Verify API — \$0.10/call — Attorneys, platforms, A&Rs

Go-to-Market: Distributors

Primary target: mid-tier independent distributors (50K–500K artists). Their legal teams are actively worried about AI-assisted liability.

Integration: POST /api/kernel/verify-cert returns a JSON chain-of-custody record in under 2 seconds.

Secondary: sync licensing agencies. Chain-of-title is contractually mandatory.

Tertiary: publishing administrators.

90-Day Priorities

- Close first distributor capacity-license pilot
- Ship public Verify API documentation
- Stabilize subscription funnel (sign-in + checkout + mastering 500 fixes)
- Certify 100+ public tracks to seed the verification network
- Label Hub: artist roster, cert status, bulk export
