

GravelKing Pro / GravelKing Productions

Financial appraisal and transaction-readiness memo

Prepared September 6, 2026. This is a decision model, not a certified valuation, investment advice, tax opinion, or guarantee of sale price.

Executive conclusion

Closest honest current value: \$250,000–\$750,000 for the whole operating package in an asset sale or acqui-hire-style transaction, assuming the buyer receives the app, backend, MLK code/IP, MorrisLawKernel repository, deployment knowledge, and clean transfer rights. A strategic buyer with a clear distribution need could justify approximately \$750,000–\$1.5 million, but the upper band needs paid retention, documented IP ownership, and a partner pilot. A conventional venture valuation is not supported by the current verified revenue baseline yet.

Verified operating snapshot

Metric	Production snapshot	Interpretation
Users	123	Early installed base; not yet a monetization proof point
Tracks	41	Real product activity, but not enough to establish retention
Certificate stubs	27	Evidence of IP/provenance demand and product depth
Active/trial subscriptions	1	Current recurring revenue is very small
Paid invoices in production	\$19.98 across 4 paid invoices	Use as recorded baseline; reconcile with Stripe before diligence
Node Auditor tier users	23	Treat as entitled accounts until billing/contract provenance is verified
Public product	gravelkingpro.com	Live and externally demoable; Google Play listing is reachable

What is valuable now

1. Product/IP surface: JAX persistent sessions, immutable lyric snapshots, deterministic preservation of human lyric lines, authorship scoring, certificate generation, Vocal Booth/karaoke tooling, unmastered generation, and MLK v3.5 mastering. 2. Deployment surface: live web product, API server, Stripe, Play Billing/TWA, object storage, and operational safeguards. 3. Defensibility: the split-key certificate architecture, lyric audit trail, MLK implementation, and the standalone MorrisLawKernel repository. 4. Strategic fit: a buyer can acquire a coherent creator-audio workflow instead of assembling multiple point tools.

Valuation bands

Scenario	Indicative value	What must be true
Fast asset sale today	\$250k–\$500k	Clean IP assignment, repository handoff, live demo, no material legal encumbrance
Strategic sale today	\$500k–\$1.5m	Buyer values provenance + MLK + creator workflow and can distribute it
Bootstrap milestone sale	\$1.5m–\$4m	12–24 months of paid retention, \$150k–\$400k ARR, partner proof, documented IP
Venture-backed outcome	\$5m+	Usually requires material ARR growth, strong retention, repeatable acquisition, and a fundable t

Investment ask recommendation

Do not lead with a large institutional round yet. A credible bootstrap or strategic pre-seed ask is \$250,000–\$500,000 on a milestone-based SAFE or revenue-share structure, with the money tied to: paid conversion, retention, partner pilots, IP diligence, and production reliability. An ask above \$750,000 is possible only if you can show a buyer/investor a repeatable acquisition channel and clean paid-user evidence.

Base-case forward model (illustrative, not a promise)

Milestone	Paid accounts	Blended monthly revenue	Annualized run-rate
Now	1 recorded active/trial subscriber	\$250-\$100	~\$300-\$1,200
12-month proof point	300 paid accounts	~\$6k-\$10k	~\$72k-\$120k
24-month small business	1,000 paid accounts + 5 partner accounts	\$25k-\$45k	~\$300k-\$540k
Strategic traction	2,500 paid accounts + 15 partner accounts	\$70k-\$120k	~\$840k-\$1.44m

Fastest value-building moves and estimated success odds

Move	Why it changes value	12-month success odds*
Prove paid retention with one paid cohort	Turns feature depth into recurring-revenue evidence	55–70%
Close one label/studio/school pilot	Creates distribution and a partner reference	35–55%
Reconcile all entitlements and billing	Removes diligence uncertainty around 23 Node Auditor users	80–95%
Package IP chain-of-title and repository transfer	Reduces buyer friction and legal discount	75–90%
Publish a 2-minute product proof funnel	Improves conversion from traffic to activation	45–65%
Narrow the product story to provenance + production	Makes the strategic buyer obvious	70–85%

*These are execution estimates based on the current product state, not statistical probabilities. They assume focused weekly execution, no major platform outage, and no material IP dispute.

Hard diligence gaps to close before a sale or serious raise

- Reconcile Stripe invoices, subscriptions, Play Billing, and the Node Auditor entitlement list into one auditable revenue ledger.
- Produce an IP schedule naming code, model access, MorrisLawKernel repository, MLK v3.5 artifacts, certificates, domains, trademarks, and third-party licenses.
- Document founder/contractor assignment agreements.
- Separate deployed production assets from development-only assets and confirm backup/restore.
- Prove retention and paid conversion with a defined cohort rather than total account count.
- Prepare a buyer data room with architecture, security, unit economics, support burden, and a 30-day pilot report.

Bottom line

The software is worth materially more than its current revenue because it is a coherent, live, technically differentiated asset. It is not yet worth a venture-style headline valuation on the evidence currently visible. The fastest path to a higher price is not adding more features; it is converting the existing product into paid retention, one repeatable partner channel, and a clean diligence package.

Source note: production counts were queried from the project production database on September 6, 2026. Revenue values are recorded production-mirror values and should be reconciled against the Stripe dashboard before being used in a transaction.
